Overview of our Runs for Task 3: Text Simplification - Rewriting Scientific Text

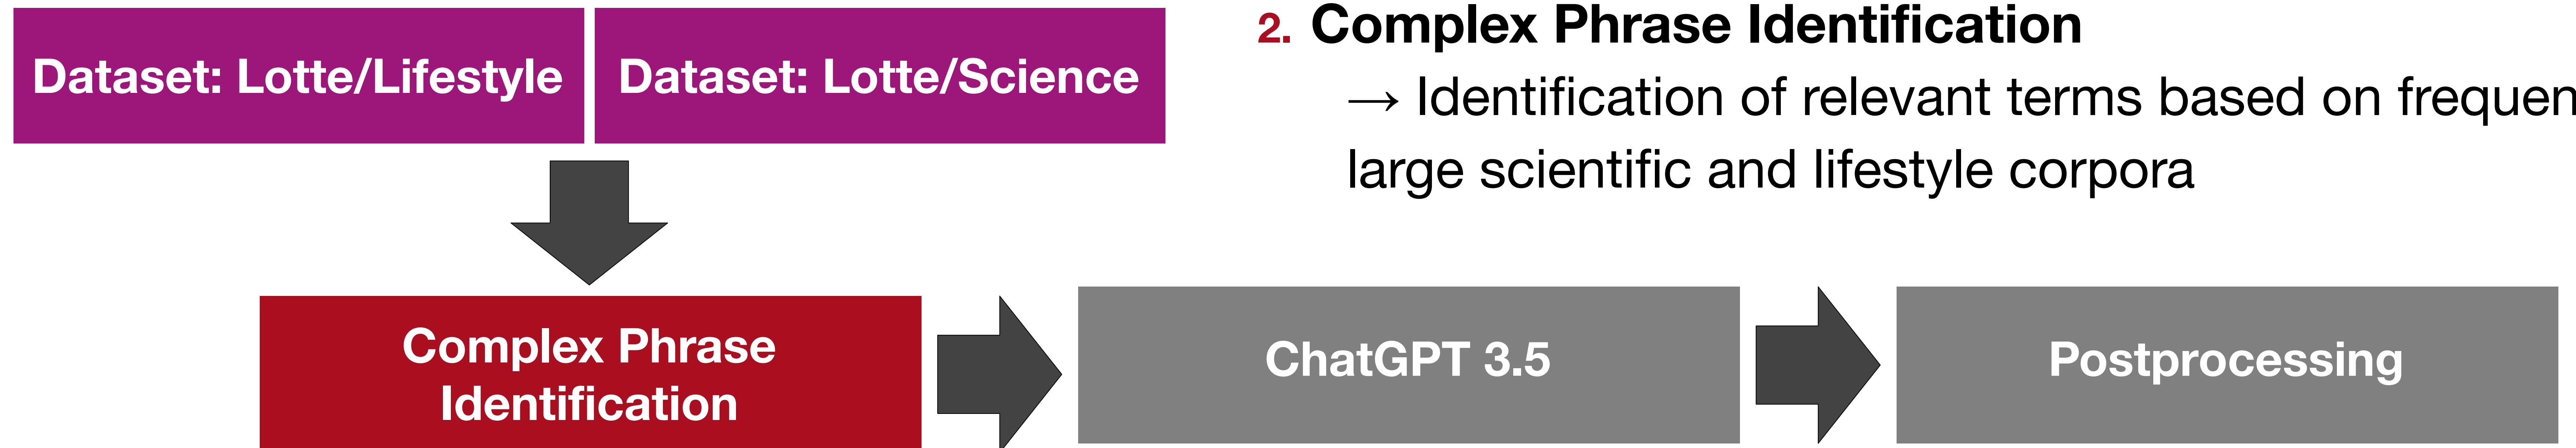

Motivation and Goals

Run: ChatGPT “2stepTurbo”

Run: ChatGPT “2stepTurbo” – Complex Phrase Identification

1. Phrase Identification

→ Identification of n-gram keyphrases via 🙌 model (KBIR-inspec)

2. Complex Phrase Identification

→ Identification of relevant terms based on frequencies in large scientific and lifestyle corpora

Indeed, modelling of an [infection network] between viral and cellular proteins will provide a conceptual and analytic framework to efficiently formulate new [biological hypothesis] at the [proteome] scale and to rationalize [drug discovery].

Run: ChatGPT “2stepTurbo” – ChatGPT

- Assessed: chain-of-thought, few-shot, zero-shot
- Setup prompt:
 - Task is to **simplify for non-expert readers**
 - **Complex phrases indicated** in text
 - Need to be simplified or explained

Runs: Summarization with T5 and PEGASUS

- Pretrained T5-base and PEGASUS by Tuner007 via 🙌
- For T5 Noaron: Removal of frequently AI hallucination artefact:
[aaron carroll](#): modelling of an infection network between viral and cellular proteins will provide a conceptual framework.

Evaluation and Run Prioritization

- Focus on manual evaluation
- T5_noaron best performing model according to quant. measures
- Manual evaluation: ChatGPT approach **least nonsense and hallucination, most meaning preservation, best abbreviation handling**

measure	source texts	ChatGPT	t5	t5_noaron	pegasus
empty texts ↓	-	3	148	148	1
compression ↑	-	1.16 ± 0.72	1.53 ± 2.3	1.55 ± 2.34	1.0 ± 1.6
Flesch ↑	36.7 ± 23.33	42.41 ± 21.61	46.4 ± 38.65	46.3 ± 38.85	38.79 ± 23.28
Dale-Chall ↓	12.68 ± 2.18	12.35 ± 1.96	12.41 ± 3.05	12.37 ± 3.05	11.44 ± 2.62
difficult words ↓	8.51 ± 4.32	7.55 ± 3.33	6.23 ± 2.86	6.2 ± 2.88	7.99 ± 3.83
reading time ↓	1.94 ± 0.99	1.71 ± 0.68	1.45 ± 0.59	1.44 ± 0.59	2.24 ± 1.03
syllable count ↓	39.12 ± 20.07	34.4 ± 13.81	29.22 ± 12.22	29.11 ± 12.25	45.23 ± 20.86
lexicon count ↓	22.51 ± 11.05	20.26 ± 8.04	16.88 ± 7.04	16.8 ± 7.07	26.18 ± 11.73
sentence count ↓	1.05 ± 0.58	1.07 ± 0.29	1.44 ± 0.56	1.44 ± 0.56	1.32 ± 0.62

Evaluation and Run Prioritization: Manual Evaluation

Source Sentence

There are two challenges in analyzing the NHPu0027s surveillance video: the NHPu0027s behaviors are lack of regularity and intention, and serious occlusions are brought by the fences of the cages.

ChatGPT “2stepTurbo”

The irregular behavior of non-human primates and occlusions caused by cages' fences make it challenging to analyze their surveillance video footage.

Most noteworthy:

- Replacement of **abbreviations**
- Resolution of **unicode formatting issues**
- Resolution of **syntactical-deductive sentence structure**
- **Other linguistic simplification** (vocabulary, sentence length, reformulation)

Conclusion

- 4 submitted runs
- Motivation: Focus on target-audience-specific aspects
 - Priority based on manual evaluation
 - Criteria from task definition and derived from dataset
- ChatGPT with complex phrase identification best according to manual evaluation, performed well in Lab (**SARI 46.98**)
- T5 and PEGASUS best according to quantitative metrics, but perform worse in SARI (T5: 37.83, T5_noaron: 37.84, PEGASUS: 23.28)
